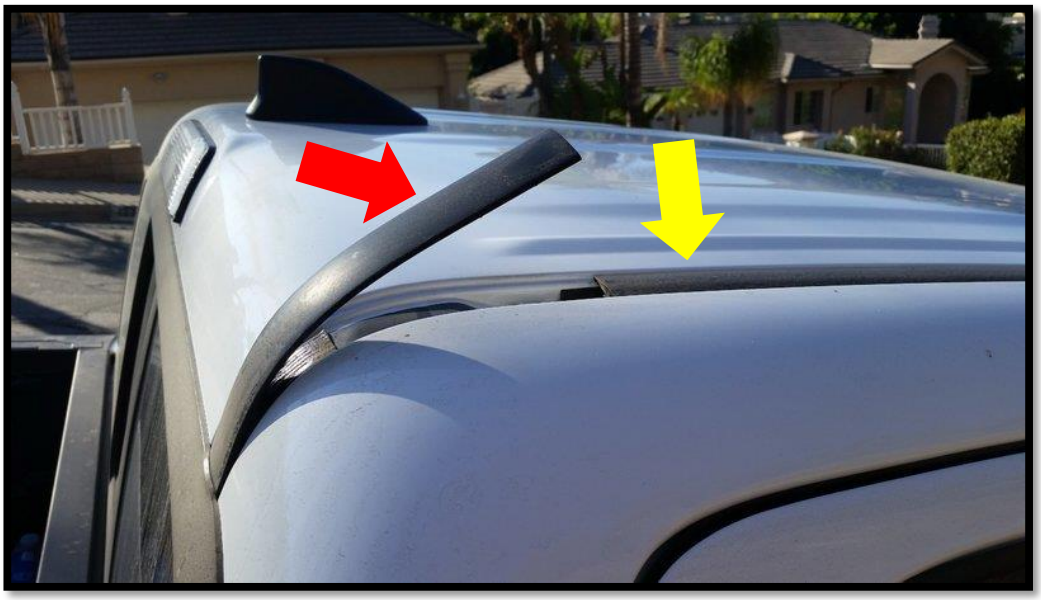
TACOMA ROOF RACK 2016+

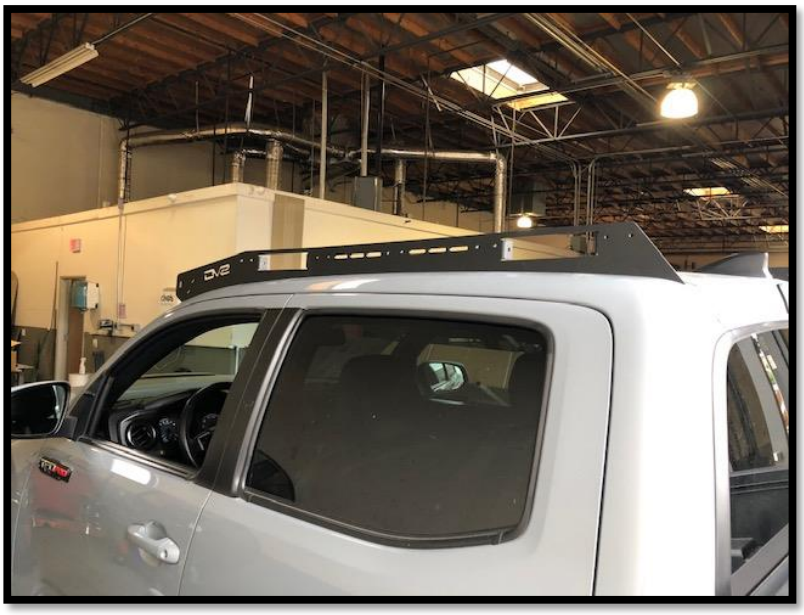
(RRTT1-01)

1. **Begin by pulling back the rear portion of the weather stripping on each side (red arrow).**



2. **Them remove the main strip by starting from the back (yellow arrow) until fully removed.**

3. **Hold each side of the rack onto the roof. This will help you locate the factory installed nutserts in the roof. (NOTE: The nutserts are hidden by color matched tape.)**



4. **Peel back the tape and place each side of the rack over holes. (NOTE: When installing the bolts into the factory nutserts, place a small amount of silicone on the bolt to prevent leaking).**

5. **Beginning from the front (1) and rear (6) first, install the cross bars using supplied hardware. Be sure to leave all bars loose until they are all installed. (NOTE: You do not need to use the supplied spacers unless you are unable to install the rack without gaps in the cross bars).**

6. **Continue to install all bars. Tighten all hardware until secure.**

- **Rack is designed to hold ~100lbs evenly distributed.**
- **Rack is designed for a 45” curved light bar (~47.25” mount to mount)**
- **Rack can hold (4) 6” single row bars**
