FACTOR 55® CLOSED SYSTEM WINCHING®

MADE IN USA

Pictured with optional F55 Ropeguard

ULTRAHOOK® WINCH SHACKLE MOUNT

The functionality of a hook with the benefits of Closed System Winching®.

Originally developed to meet the needs of off-road racers who wanted the speed of a hook and functionality of closed system winching, the low-profile UltraHook features an industry-first closed system shackle mount hole machined into the body of the hook, and installs in minutes. A latch pin, which is stored in the hook's body, can lock the safety latch securely into place for a true Closed Loop System™. Integrated finger grips promote proper "Hook Up" orientation. UltraHook is the first winch hook that can be stored neatly against the winch's fairlead protecting it from metal-to-metal connection, thanks to EPDM rubber pads, which also eliminate the UltraHook from rattling. With a variety of colors to choose from, buyers can match the UltraHook to their rig.

- Easy-to-install shackle mount with a hole machined into the hook's body. Shackle pin mounting hole accepts screw pins from common 3/4", and soft shackles up to 7/16"
- Safety latch with integrated latch lock pin allows for true closed system winching
- Includes 5/8" diameter aerospace-grade 6AI-4V grade V titanium double-shear pin
- Made from machined lightweight billet 6061 aluminum for superior durability
- EPDM rubber pads for fairlead protection, titanium double shear pin, and a finger grip feature that promotes proper "Hook Up" orientation; also prevents rattling
- Can be used with line diameters up to 3/8"
- Intended for use with winches 16,500 lbs. in capacity or less
