INSTALLATION

1. Using a properly rated jack, raise the rear of the vehicle and support the frame rails with jack stands. Ensure the jack stands are secure and set properly before lowering the jack. NEVER WORK UNDER AN UNSUPPORTED VEHICLE. Remove the rear wheels.

2. Remove the factory shock using two 17mm socket/wrenches.

3. Install the RXT shock using the factory lower bolt on the lower shock mount and the supplied bushing kit for the upper stem mount. Install stem bushings and hardware as shown in the diagram: Install the lower nut and fasten until there are enough exposed threads available to secure the upper jam nut. Install jam nut until it is flush with the top of the stem (DO NOT OVERTIGHTEN) and torque to 50 ft-lbs while holding the lower nut with a 19mm wrench. Do not overtighten bushing assembly, as this can lead to shock stem failure. Failure caused by incorrect installation of stem bushings and hardware is NOT covered under ICON's warranty policy.

4. Mount the reservoir to the reservoir bracket using the supplied hose clamps and a 5/16" nut driver. Make sure that the hose clamps line up with the machined grooves on the reservoir surface.

FIG.1

6. Remove the reservoir bracket from the reservoir.

7. Center punch the hole location previously marked and then drill an 11/32" hole in the frame. Be careful not to drill through any lines or wires running inside of the frame channel.

8. Thread the holes using the supplied 3/8" self tapping bolts and a 9/16" socket.

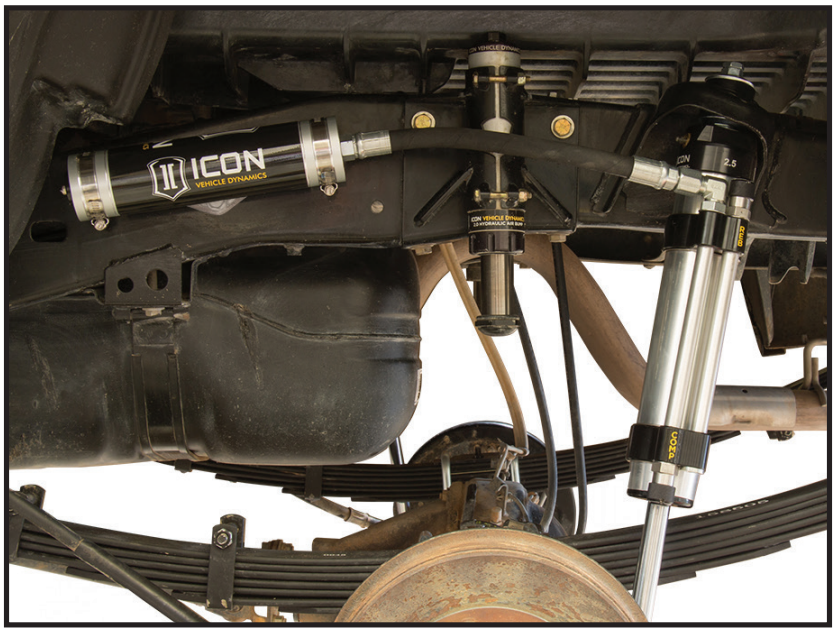

9. Fasten the reservoir bracket to the frame using the self tapping bolts.

10. Mount the reservoir to the bracket using a 5/16" nut driver. Make sure that the hose clamps line up with the machined grooves on the reservoir surface.

11. Install the wheels and lower the vehicle back to the ground. [Torque lugs to factory spec]

VERIFY ALL FASTENERS ARE PROPERLY TORQUED BEFORE DRIVING VEHICLE.

RETORQUE ALL NUTS, BOLTS AND LUGS AFTER 100 MILES AND PERIODICALLY THEREAFTER.
