INSTALLATION INSTRUCTONS

1. Due to the use of aftermarket wheels, ensure clearance between the wheels used on the vehicle and the factory caliper before beginning installation. If no clearance exists a wheel spacer could be needed for adequate clearance.
2. After confirming clearance, remove the front wheels and tires and support the vehicle.
3. Identify the front and rear caliper covers. The front caliper covers are larger than the rear. **See Photo 1 & 2**

Front Caliper Covers

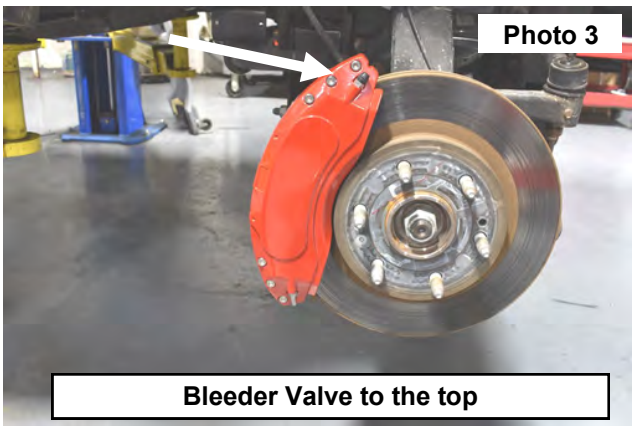

Photo 2

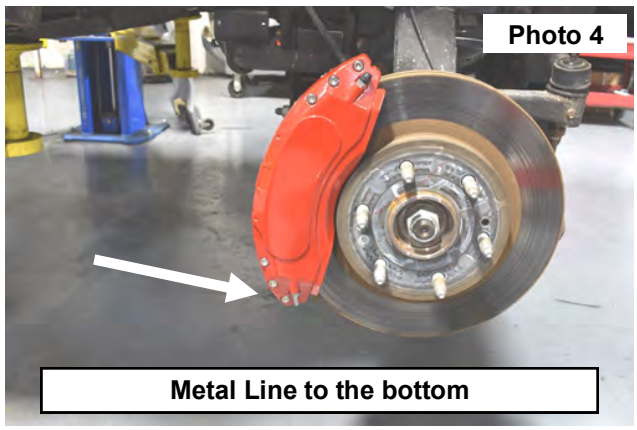

Rear Caliper Covers

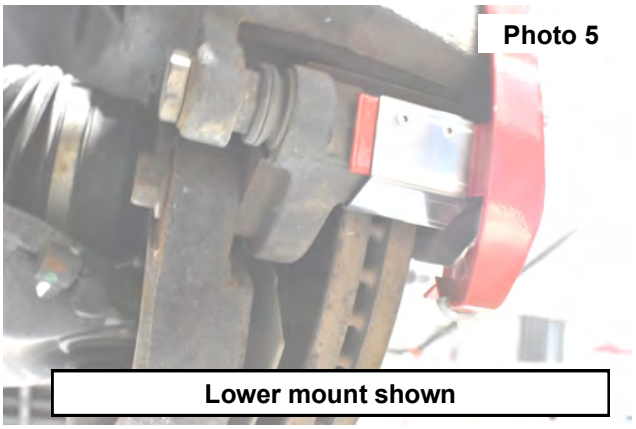

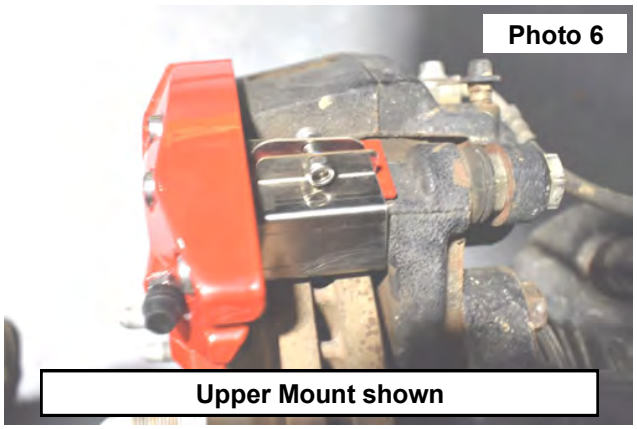

4. Install the front caliper cover with the adjustment bleeder up and the metal line down. **See Photo 3 & 4.**

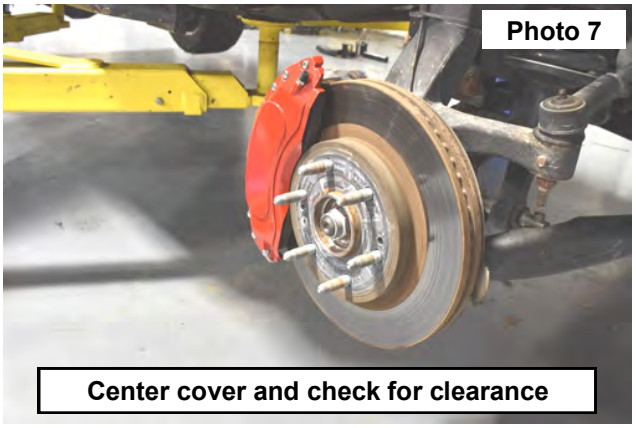

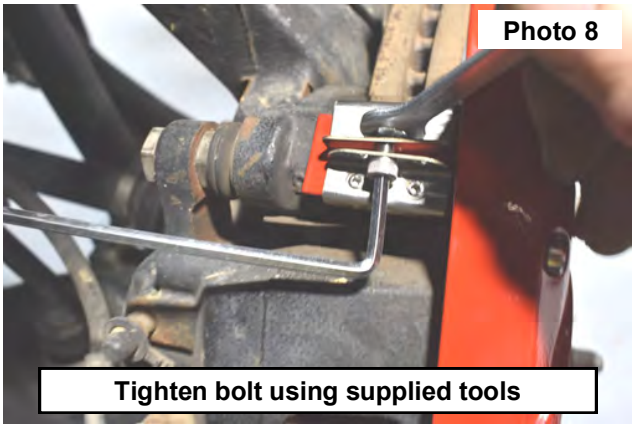

5. Slide the lower mount between the caliper and the rotor as shown in **Photo 5.**
6. Position the upper mount on the top of the caliper and slide the clip between the caliper and rotor. **See Photo 6.**

7. Center the caliper cover on the caliper. **See Photo 7.**
8. Secure with the supplied bolt / nut and tighten with the supplied allen wrench. **See Photo 8.**

9. Check to make sure there are no clearance issues with the caliper cover on the rotor and the dust shield. In some cases it could be necessary to slightly modify the dust cover to clear the caliper cover.
10. Install the tires and wheels and check for clearance issues between the wheel and covers. Address as needed to ensure no rubbing is present.
11. Proceed to the rear and install the covers if applicable using the same installation instructions as the front.
12. After tire and wheels are installed lower the vehicle to the ground.
13. Test drive the vehicle making sure there are no clearance issues. Address as needed.
